

# Degree Program Student Learning Report

Revised August 2017

## Department of Mathematics & Physical Sciences

### AS in Physical Science

For 2019-2020 Academic Year

#### PART 1

#### Degree Program Mission and Student Learning Outcomes

A. State the school, department, and degree program missions.

University Mission	School Mission	Department Mission	Degree Program Mission
<p>Our mission is to ensure students develop the skills and knowledge required to achieve professional and personal goals in dynamic local and global communities.</p>	<p>Central to the mission of the School is the preparation of students to achieve professional and personal goals in their respective disciplines and to enable their success in dynamic local and global communities. Our strategy is to foster an academic setting of diverse curricula that inherently incorporates an environment of service and collegiality.</p>	<p>The mission of the Department of Mathematics and Physical Sciences at Rogers State University is to support students in their pursuit of knowledge in mathematics and physical science.</p>	<p>The Associate of Science in Physical Science consists of general education curriculum and courses supporting other departmental programs. In support of the mission of the university, the school, and the department, the degree seeks to provide a solid general education component for all university students, provide curriculum in the physical sciences for students who are preparing for a baccalaureate-granting program, and provide programs of study to students presently in the work force, allowing them the opportunity to continue their education.</p>

**B. Align school purposes, department purposes, and program student learning outcomes with their appropriate University commitments.**

University Commitments	School Purposes	Department Purposes	Student Learning Outcomes
<p>To provide quality associate, baccalaureate, and graduate degree opportunities and educational experiences which foster student excellence in oral and written communications, scientific reasoning and critical and creative thinking.</p>	<p>The School offers innovative degrees, which focus upon developing skills in oral and written communication, critical thinking, creativity, empirical and evidenced-based inquiry, experimental investigation and theoretical explanation of natural phenomena, and innovative technology.</p>	<p>1. To increase the student's critical thinking and reasoning abilities.</p> <p>2. To increase the student's understanding and appreciation of the physical world, and the ability to apply this understanding in his/her personal and professional life.</p> <p>3. To increase the student's awareness of the benefits of incorporation of technology into Science and Math studies.</p> <p>4. To increase the student's ability to interpret and understand his/her world mathematically.</p>	<p>1a. Demonstrate a thorough knowledge and understanding of basic physical science principles and their applications (outcome meets in two different department purposes – 1a and 5a).</p> <p>1b. Apply problem solving skills through critical thinking and scientific methods (meets in 1b and 2b).</p> <p>2a. Demonstrate an ability to design and conduct experiments, as well as to analyze and interpret data (meets in 2a, 3b, and 4a).</p> <p>2b. Apply problem solving skills through critical thinking and scientific methods (meets in 1b and 2b).</p> <p>3a. Demonstrate an ability to design and conduct experiments, as well as to analyze and interpret data (meets in 2a, 3a, and 4b).</p> <p>4a. Explain and predict quantitative, analytical and graphical situations</p> <p>4b. Demonstrate an ability to design and conduct experiments, as well as to analyze and interpret data (meets in 2a, 3a, and 4b).</p>

<p>To promote an atmosphere of academic and intellectual freedom and respect for diverse expression in an environment of physical safety that is supportive of teaching and learning.</p>	<p>The School educates its majors to think independently and have the knowledge, skills and vision to work in all types of situations and careers and communicate with all types of people.</p>		
<p>To provide a general liberal arts education that supports specialized academic programs and prepares students for lifelong learning and service in a diverse society.</p>	<p>The School offers general education courses of high quality and purpose that provide a foundation for lifelong learning.</p>	<p>5. To prepare a student to matriculate into a four-year degree program in math or science-related fields or graduate.</p>	<p>5a. Demonstrate a thorough knowledge and understanding of basic physical science principles and their applications (meets in 1a and 5a).</p>
<p>To provide students with a diverse, innovative faculty dedicated to excellence in teaching, scholarly pursuits and continuous improvement of programs.</p>	<p>The School fosters a community of scholars among the faculty and students of the institution.</p>		
<p>To provide university-wide student services, activities and resources that complement academic programs.</p>			
<p>To support and strengthen student, faculty and administrative structures that promote shared governance of the institution.</p>			
<p>To promote and encourage student, faculty, staff and community interaction in a positive academic climate that creates opportunities for cultural, intellectual and personal enrichment for the University and the communities it serves.</p>	<p>The School will offer and promote artistic, scientific, cultural, and public affairs events on the campus and in the region.</p>	<p>6. To serve as a resource for the community, utilizing the expertise of the faculty.</p>	

**PART 2**  
**Revisit Proposed Changes Made in Previous Assessment Cycle**

Revisit each instructional/assessment change proposed in Part 5 of the degree program SLR for the preceding year. Indicate whether the proposed change was implemented and comment accordingly. Any changes the department implemented for this academic year, but which were not specifically proposed in the preceding report, should also be reported and discussed here. Please note if no changes were either proposed or implemented for this academic year.

<b>Proposed Change</b>	<b>Implemented? (Y/N)</b>	<b>Comments</b>
Department was planning to incorporate Graduating Student Survey results about overall department experience for this assessment cycle.	N	It was debatable to include these survey results as an SLO and as a result it is under revision.
No changes were implemented for this academic year		

**PART 3**  
**Response to University Assessment Committee Peer Review**

The University Assessment Committee provides written feedback on departmental assessment plans through a regular peer review process. This faculty-led oversight is integral to RSU's commitment to the continuous improvement of student learning and institutional effectiveness. UAC recommendations are not compulsory and departments may implement them at their discretion. Nevertheless, respond below to each UAC recommendations from last year's peer review report. Indicate whether the recommendation was implemented and comment accordingly. Please indicate either if the UAC had no recommendations or if the program was not subject to review in the previous cycle.

<b>Peer Review Feedback</b>	<b>Implemented (Y/N)</b>	<b>Comment</b>
UAC asked us to make the current data more distinguishable from past years' data.	Y	Data for Chemistry for current academic year is in bold font and separated from past years data with one blank line.

**PART 4**  
**Evidence of Student Learning**

Evidence and analyze student progress for each of the student learning outcomes (same as listed in Part I B above) for the degree program. See the *Appendix* for a detailed description of each component. Note: The table below is for the first program learning outcome. Copy the table and insert it below for each additional outcome. SLO numbers should be updated accordingly.

<b>A.</b>						
<b>Student Learning Outcome</b>						
<b>B.</b> <b>Assessment Measure</b>	<b>C.</b> <b>Performance Standard</b>	<b>D.</b> <b>Sampling Method</b>	<b>E.</b> <b>Sample Size (n)</b>	<b>F.</b> <b>Results</b>	<b>G.</b> <b>Standard Met (Y/N)</b>

**H.**

**Conclusions**

1A. This year the standards were not met. However, in overall average during the last ten years, a majority of majors (more than 50%) in CHEM 1415 were able to possess basic knowledge of chemistry, and have an understanding of its principles and their applications and thus met the standards. With small N (number of majoring students in CHEM 1415), annual fluctuations are to be expected. Keeping an average of the data reveals any on-going trends.

1B. The expected standards were met. The results were above or very close to the performance target in five of the last seven years where data were available, suggesting students (majors) understand the basic trigonometric concepts to the standards expected by the department.

1C. Standards were met for 5 times in last 8 academic years.

1D. Because there were only three students who were at the appropriate academic level to take the Historical Geology course, the course was cancelled. As a result of this, these students transferred elsewhere to continue their Geology degrees. Perhaps increased/targeted recruitment in the high schools would alleviate this problem. Also, the emphasis on recruiting should be shifted to discussion of other geology career opportunities in addition to the petroleum industry. There are still great job opportunities in Oklahoma and our neighboring states and maybe we should be willing to target some of those students.

**A.**  
**Student Learning Outcome**

SLO #2: Apply problem solving skills through critical thinking and the scientific methods.

<b>B. Assessment Measure</b>	<b>C. Performance Standard</b>	<b>D. Sampling Method</b>	<b>E. Sample Size (n)</b>	<b>F. Results</b>	<b>G. Standard Met (Y/N)</b>

**Conclusions**

2A. This measure was met in last five years continuously (eight of the past ten years). With small N (number of majoring students in CHEM 1415), annual fluctuations are to be expected. Keeping an average of the data reveals any on-going trends.

2B. Performance standards were met seven out of last eight years (data were not available for one year). Majority of Math. and Physical Science (MPS) majoring students taking MATH 1613, Trigonometry, demonstrate required skills in problem solving (related to topics trigonometric functions, inverse trigonometric functions, and complex numbers) through critical thinking and by applying trigonometric concepts.

2C. Performance standards were met five times in past eight years.

2D. This measure was not met in the past year. Because it is a geology major course, it is only offered when there are enough possible students to have a full class. The class was not offered in 2016-17, so we offered it to the few geology students who needed it. In 2018-19 there were only 3 students enrolled, and it was cancelled. Because of this, the students who were enrolled opted to change schools due to the feeling that they were never going to progress in the program. This loss of faith in the program has seriously impacted the enrollment at RSU even though there are ample jobs available within Oklahoma and adjacent states. It is possible that with increased recruiting at area high schools, we may be able to impress on the potential students that the jobs are available. Many may just prefer to go the institutions where they can complete the courses readily and not have to worry about not progressing in the program. The conversations I have had with students is that they would prefer to complete the program at RSU due to the lower cost then at the comprehensive universities. However, they do not make progress in our AS degree due to lack of enrollment and then them lose confidence of finishing the AS and move to other universities. I firmly believe that if they could gain some confidence that they could count on the courses making, that the enrollment would increase.

**H.**

**Conclusions**

4A. Standards were met for the last ten academic years continuously. A majority of majors in CHEM 1415 were able to design and conduct experiments, and successfully analyze and interpret the data gathered from them. With small N (number of MPS majoring students in CHEM 1415), annual fluctuations are to be expected. Keeping a moving average of the data reveals any on-going trends.

4B. MPS majors in PHYS 1114 & PHYS 2015 were able to conduct the experiments and analyze and interpret the data using mathematical and/or graphical tools. Standards were met for eight academic years consistently.

**PART 5**

**Proposed Instructional or Assessment Changes**

Learning outcomes assessment can generate actionable evidence of student performance that can be used to improve student success and institutional effectiveness. Knowledge of student strengths and weakness gained through assessment can inform faculty efforts to improve course instruction and program curriculum. Below discuss potential changes the department is considering which are aimed at improving

student learning or the assessment process. Indicate which student learning outcome(s) will be affected and provide a rationale for each proposed change. These proposals will be revisited in next assessment cycle.

Proposed Change	Applicable Learning Outcomes	Rationale and Impact
Department's plan to incorporate Graduating Student Survey results about overall department experience for the next assessment cycle is under revision.	Graduating students will indicate (rate) their satisfaction about overall department experience.	Department purpose 6 has no student learning outcome aligned with it, and addition of this new student learning outcome will help to assess and improve department services.

## PART 6

### Summary of Assessment Measures

- A.** How many different assessment measures were used?  
Nine different assessment measures were used.
- B.** List the direct measures (see appendix):  
Nine direct measures:  
[1] Gen. Chemistry II: The American Chemical Society (ACS) Academic Assessment Exam (1A); [2] Trigonometry: Exams (1B); [3] Physics: Exams (1C, 2C); [4] Geology: Written Paper (1D); [5] Gen. Chemistry II: Lab Reports (2A); [6] Trigonometry: Class Assignments (2B); [7] Geology: Term Project (2D); [8] Physics: Laboratory Reports (3A, 4B); [9] Gen. Chemistry II: Laboratory Reports-Grades (4A)
- C.** List the indirect measures (see appendix):  
No indirect measures were used.

## PART 7

### Faculty Participation and Signatures

- A.** Provide the names and signatures of all full time and adjunct faculty who contributed to this report.

Faculty Name	Assessment Role	Signature
Dr. Jamie Graham	Collected and analyzed Geology data; Reviewed and approved final draft.	<i>Jamie D. Graham</i>
Dr. Doug Grenier	Collected and analyzed Trigonometry data; Reviewed and approved final draft.	Doug Grenier
Dr. Min Soe	Collected and analyzed Physics and Trigonometry data; Reviewed and approved final draft.	<i>Min Soe by proxy JB</i>
Dr. Kirk Voska	Collected and analyzed Chemistry data; Reviewed and approved final draft.	<i>Kirk Voska by proxy JB</i>
Dr. Kasia Roberts	Collected and analyzed Chemistry data; Reviewed and approved final draft.	<i>Kasia Roberts by proxy JB</i>
Dr. Ram Adhikari	Collected and analyzed Trigonometry data; Reviewed and approved final draft.	<i>Ram Adhikari</i>
Dr. Sukhitha Vidurupola	Prepared the report, reviewed, and approved final draft.	<i>Sukhitha Vidurupola</i>

**B. Reviewed by:**

Titles	Name	Signature	Date
Department Head	Dr. Jamie Graham	<i>Jamie D. Graham</i>	6/4/20
Dean	Dr. Keith Martin	<i>Keith W. Martin</i>	6/5/20

**Appendix**

**Student Learning Outcome**

Student learning outcomes are the observable or measurable results that are expected of a student following a learning experience. Learning outcomes may address knowledge, skills, attitudes, or values that provide evidence that learning has occurred. They can apply to a specific course, a program of study, or an institution. Outcomes should be worded in language that clearly implies a measurable behavior or quality of student work. Outcomes should also include Bloom's action verbs appropriate to the skill level of learning expected of students.

Examples:

*Students will be able to apply principles of evidence-based medicine to determine clinical diagnoses and implement acceptable treatment modalities.*

*Students will be able to articulate cultural and socioeconomic differences and the significance of these differences for instructional planning.*

**Assessment Measure**

An assessment measure is a tool or instrument used to gather evidence of student progress toward an established learning outcome. Every program learning outcome should have at least one appropriate assessment measure. Learning outcomes are frequently complex, however, and may require multiple measures to accurately assess student performance. Assessment plans should try to incorporate a combination of direct and indirect assessment measures. Direct provide concrete evidence of whether a student has command of a specific subject or content area, can perform a certain task, exhibits a particular skill, demonstrates a certain quality in their work, or holds a particular value. Because direct measures tap into actual student learning, it is often viewed as the preferred measure type. Indirect measures assess opinions or thoughts about the extent of a student's knowledge, skills, or attitudes. They reveal characteristics associated with learning, but they only imply that learning has occurred. Both types of measures can provide useful insight into student learning and experiences in a program. Each also has unique advantages and disadvantages in terms of the type of data and information it can provide. Examples of common direct and indirect measures are listed below.

Direct Measures

- Comprehensive exams
- Class assignments
- Juried review of performances and exhibitions
- Internship or clinical evaluations
- Portfolio evaluation
- Pre/post exams
- Third-party exams such as field tests, certification exams, or licensure exams
- Senior thesis or capstone projects

Indirect Measures

- Graduate exit interviews
- Focus group responses
- Job placement statistics
- Graduate school placement statistics
- Graduation and retention rates
- Student and alumni surveys that assess perceptions of the program
- Employer surveys that assess perceptions of graduates
- Honors and awards earned by students and alumni.

**Performance Standard**

A performance standard is a clearly-defined benchmark that establishes the minimally-acceptable level of performance expected of students for a particular measure.

Examples:

*At least 70% of students will score 70% or higher on a comprehensive final exam.*

*At least 75% of students will earn score a "Proficient" or higher rating on the Communicate Effectively rubric.*

### **Sampling Method**

Sampling method describes the methodology used for selecting the students that were assessed for a given measure. In some cases, such as most course-embedded measures, it is possible to assess all active enrolled students. In other cases, however, it is not feasible to measure the population of all potential students. In these cases, it is important that a well-designed sampling scheme be used to ensure the sample of students measured is an unbiased representation of the overall population. Where multiple instructors teach a particular course, care should be taken to assess students across all instructors, including adjuncts.

#### Examples:

*All students enrolled in BIOL 4801 Biology Research Methods II*

*All majors graduating in the 2016-17 academic year.*

### **Sample Size**

Sample size is the number of students from which evidence of student learning was obtained for a given assessment measure.

### **Results**

Results are an analytical summary of the findings arising from the assessment of student performance for a particular assessment measure. Typical presentation includes descriptive statistics (mean, median, range) and score frequency distributions.

### **Standard Met?**

This is a simple yes/no response that indicates whether the observed level of student performance for a particular measure meets or exceeds the established standard. An N/A may be used where circumstances prevented the department from accurately assessing a measure.

### **Conclusion**

The conclusion is a reflective summary and determination of the assessment results obtained for a specific learning outcome. Questions to consider in this section include the following:

- Does the assessment evidence indicate the learning outcome is being satisfactorily met?
- Where multiple measures are used for a single outcome, do the results present a consistent or contradictory pattern?
- What are the most valuable insights gained from the assessment results?
- What strengths and weaknesses in student learning do the results indicate?
- What implications are there for enhancing teaching and learning?
- How can the assessment process be improved?
